Week 6

Week 9

Computing Theory

# DFAs

## What can DFAs do?

- Everything that NFAs can
- For every NFA there is an equivalent DFA
- DFA may be exponentially larger ...
- There is an equivalent DFA
- For any regular grammar
- For any regular expression

Algorithm to  
convert an NFA  
to DFA

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Property of DFAs  
(Pumping Lemma)  
used to derive a  
contradiction

## What can't DFAs do?

- Recognise context-free languages
- Recognise context-sensitive languages
- Recognise recursive languages

# DFAs vs NFAs

## DFAs

- Simpler to implement
- Harder to combine
- Simpler to show properties
- Simpler to show 'negative' results
- More 'machine-friendly'

Assignment Project Exam Help

<https://powcoder.com>

Define exactly the same languages (!!)

Add WeChat powcoder

## NFAs

- Simpler to specify
- Trivial to combine
- Harder to analyse
- Simpler to show 'negative' results
- More 'human-friendly'

# Quiz time!

Go to **Canvas** and find the quiz **Lectorial 6 Question set**

- Not worth any marks
- You can consult other students if you wish
- Time limit will be 10 minutes

# Questions?

Questions?

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Questions?

# NFAs

## Two key issues

- May contain transitions
- May contain more than one transition for a given state and input

## Two solutions

- Compute the  $\epsilon$ -closure
  - Consider an input  $abc^*c^*c^*$
- Compute the possible sets of states for the NFA
  - These will be the states in the DFA (II)

<https://powcoder.com>

Add WeChat powcoder

States of the DFA are the sets of possible states in the NFA

# How did you go?

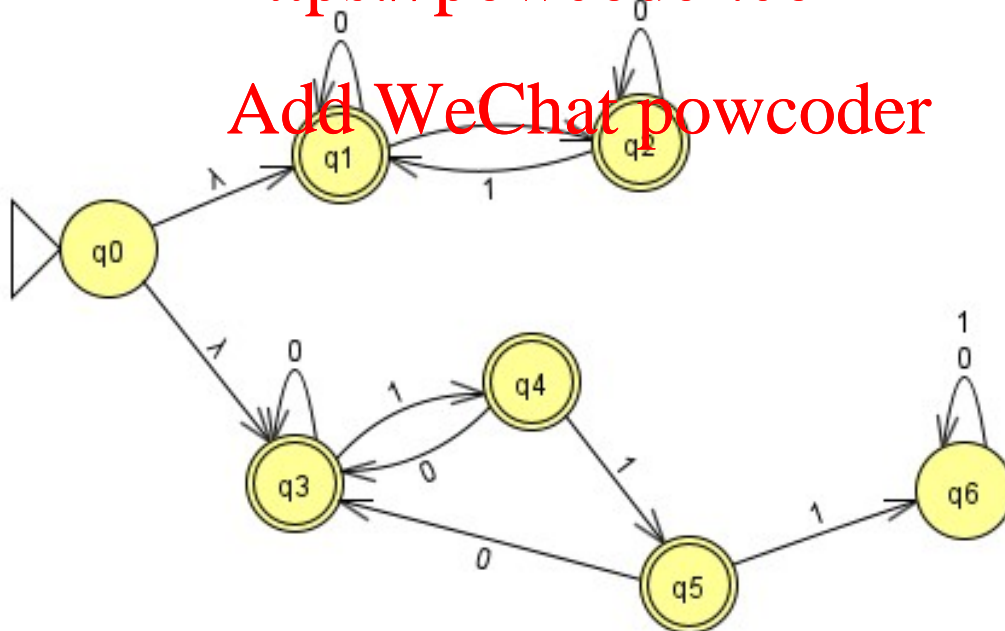

**Question 1** Consider the NFA  $M$  below. Construct a DFA which accepts the same language as  $M$ .

Add WeChat powcoder

0100110:  $q_0 q_0 q_1 q_0 q_0 q_1 q_2 q_0$

0000010:  $q_0 q_0 q_0 q_0 q_0 q_0 q_1 q_0$

For any string  $w \in L(M)$  with  $|w| \geq \#states \text{ in } M$ , there is a cycle

# Limitation of DFAs

Let  $L$  be any regular language

Then there is a DFA  $M$  such that  $L = L(M)$

Let the number of states in  $M$  be  $n$

Assignment Project Exam Help

Consider  $w \in L(M)$  with  $|w| \geq n$ , so  $w = a_1 a_2 a_3 \dots a_n a_{n+1} \dots a_{n+k}$

<https://powcoder.com>

Must repeat a state somewhere ...

$w = xyz, y$

$|xy| \leq n$

# Questions?

Questions?

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Questions?

# Pumping Lemma

For any regular language  $L$ , there is  $n \geq 1$  such that for any  $w \in L$  with  $|w| \geq n$ , there exist  $x, y, z$  such that  $w = xyz$  and

1.  $|xy| \leq n$
2.  $y \neq \epsilon$
3.  $x y^i z \in L$  for all  $i \geq 0$

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

So for any  $L$ , for some  $n$  find  $w = xyz \in L$  with  $|w| \geq n$

- If  $L$  is regular, then  $xz, xyz, xyyz, xyxyz, xyxyz, \dots$  are all in  $L$
- If  $x y^j z \in L$  for some  $j \geq 0$ , then  $L$  is not regular

# Pumping Lemma

Fig: Chomsky Hierarchy

Usual use is to show languages not regular by contradiction

1. Assume  $L$  is regular
2. Apply Pumping Lemma
3. Choose string  $w$  with  $|w| \geq n$
4. Use  $|xy| \leq n$  to get information about  $y$
5. Choose  $i$  such that  $|xwy^i| \geq n$
6. Contradiction!

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat (if powcoder works)

Conclude that  $L$  is not regular

All such proofs the same except steps 3 & 5

# Pumping Lemma

The language  $L = \{a^i b^i \mid i \geq 0\}$  is not regular

**Proof:** Assume  $L$  is regular. Then the Pumping Lemma applies and there is an  $n \geq 1$  such that for all  $w \in L$  such that  $|w| \geq n$ ,  $w = xyz$

1.  $|xy| \leq n$
2.  $y \in L$
3.  $x y^i z \in L$  for all  $i \geq 0$

<https://powcoder.com>

Add WeChat powcoder

Choose  $w = a^n b^n$  and so  $w \in L$  and  $|w| \geq n$ . So by the Pumping Lemma,  $w = xyz = a^n b^n$  and  $|xy| \leq n$ . So  $y = a^j$  for some  $1 \leq j \leq n$ .

First  $n$  characters of  $xy$  are  $a$ 's

Choose  $i = 2$  and consider  $xyyz = a^{n+j} b^n$

By the Pumping Lemma,  $a^{n+j} b^n \notin L$  (!!)

Hence  $L$  is not regular.

# Pumping Lemma

The language  $L = \{ xx^R \mid x \in \{a,b\}^* \}$  is not regular

**Proof:** Assume  $L$  is regular. Then the Pumping Lemma applies and there is an  $n \geq 1$  such that for all  $w \in L$  such that  $|w| \geq n$ ,  $w = xyz$

1.  $|xy| \leq n$
2.  $y \neq \epsilon$
3.  $xy^iz \in L$  for all  $i \geq 0$

<https://powcoder.com>

Add WeChat powcoder

Choose  $w = a^n b b a^n$  and so  $w \in L$  and  $|w| \geq n$ . So by the Pumping Lemma,  $w = xyz = a^n b b a^n$  and  $|xy| \leq n$ . So  $y = a^j$  for some  $1 \leq j \leq n$ .

First  $n$  characters of  $xy$  are  $a$ 's

Choose  $i = 2$  and consider  $xyyz = a^{n+j} b b a^n$

By the Pumping Lemma,  $a^{n+j} b b a^n \notin L$  (!!)

Hence  $L$  is not regular.

# Pumping Lemma

The language  $L = \{a^i \mid i \text{ is prime}\}$  is not regular

**Proof:** Assume  $L$  is regular. Then the Pumping Lemma applies and there is an  $n \geq 1$  such that for all  $w \in L$  such that  $|w| \geq n$ ,  $w = xyz$

1.  $|xy| \leq n$
2.  $y \neq \epsilon$
3.  $xy^iz \in L$  for all  $i \geq 0$

<https://powcoder.com>

Add WeChat powcoder

Choose  $w = a^m$  where  $m$  is prime and  $m > n$ . So  $w \in L$  and  $|w| \geq n$ . So by the Pumping Lemma,  $w = xyz = a^m$  and  $|xy| \leq n$ .

This means  $|xyz| = m$

Choose  $i = m+1$  and consider  $|xy^{m+1}z| = |xyz| + m|y| = m + m|y| = m(|y|+1)$

By the Pumping Lemma,  $a^{m(|y|+1)} \in L$  but  $m(|y|+1)$  is not prime (!!)

Hence  $L$  is not regular.

# Pumping Lemma

The language  $L = \{ ??? \}$  is not regular

**Proof:** Assume  $L$  is regular. Then the Pumping Lemma applies and there is an  $n \geq 1$  such that for all  $w \in L$  such that  $|w| \geq n$ ,  $w = xyz$

1.  $|xy| \leq n$
2.  $y \neq \epsilon$
3.  $xy^iz \in L$  for all  $i \geq 0$

<https://powcoder.com>

Add WeChat powcoder

Choose  $w = ???$  and so  $w \in L$  and  $|w| \geq n$ . So by the Pumping Lemma,  $w = xyz = ???? \in L$  and  $|xy| \leq n$ . So  $y = ???? \in L$

Choose  $i = 2$  (try 2 first) and consider  $xy^2z = ???? \in L$

By the Pumping Lemma,  $xy^2z \notin L$  (!!)

Hence  $L$  is not regular.

# Regular languages

## Regular languages

- Generated by regular grammars
- Specified by regular expressions
- Accepted by NFAs
- Accepted by DFAs
- Pumping Lemma holds
- Pumping Lemma used by contradiction to show languages not regular
- Any NFA can be converted into an equivalent DFA
- DFA can be exponentially larger than the NFA
